FRONTEND ENGINEER

Warsaw

Company Description

EcoVadis is an award-winning platform which promotes Sustainability across thousands of companies and their suppliers, making a real impact on the environmental and social practices of companies around the world.

We are now starting a new greenfield project related to online technology, and are looking for Engineers to lead this effort. This project will offer great opportunities to use modern and innovative technologies and tools as well as a great amount of autonomy in how you want to do your work.

About EcoVadis

We are looking for crafts(wo)men with strong autonomy to propose, participate and lead the evolution of our engineering culture and technical stack. We value strong technical skills, experience, and a desire to innovate in technology. Public code contributions will speak in your favor.

We're all about open communication, transparency, and a passion for building a product with excellence - we'll trust you to match that passion. We want to see a desire to always self-improve and continuously learn. Participation in meetups, conferences, and side projects will be a great indication of that.

Job Description

You will take on a position of a front-end engineer in our core development team.

This will include:

- Designing and implementing a modular front-end architecture from scratch and bring it to maturity
- Providing guidance around the craftsmanship, availability and scalability of our software product and helping managing risks throughout the development process
- As part of one of the development teams, working with the Product Manager to clarify requirements and creating high-quality software within the Agile framework (including design, coding, testing and deployment)

All of which will be in collaboration with other (eg. backend) architects and developers.

Qualifications:

What we are looking for?

You will have a passion for technology and for getting things done well, including a track record of problem solving and design skills.

You will also have:

- A University degree in computer science or related field, or equivalent experience
- At least 3 years of experience as a Front-end Developer or Engineer, with an excellent command of JavaScript (vanilla, ES6)
- A solid grasp of Angular 4 (or Angular 1, Aurelia, Durandal, React), development tools (eg SASS, webpack, grunt, npm, Typescript), testing best practices and continuous integration tools in an Agile environment
- Experience in working within a modular, service-oriented architecture
- An understanding of UX principles
- A knowledge or awareness of frameworks like Bootstrap, Foundation, Angular Material, etc
- Solid knowledge of HTML and CSS (animations, flexbox, CSS grid layout, vh, vm, etc)
- A knowledge or awareness of project methodologies (BEM, SMACSS, Atomic CSS, John Papa's Angular guidelines, etc.)
- A proven track record in building responsive websites and webapps for a variety of platforms and devices.
- Fluency in English
- An insatiable thirst for knowledge and desire to learn
- A craving for experimenting and trying out new tools and approaches, even if just to know why you dislike them
- An ability to work on your own initiative as well as fit in a larger team
- No fear of asking questions as well as willingness to help others with your expertise

In return for your expertise and energy, we offer:

- You will get a competitive local salary
- You will get a great degree of autonomy in how you work
- We are open to candidates from all over the world and will offer visa sponsorship and relocation support
- Your healthcare will be covered
- Your package will also include sports benefits, a training budget, and French classes
- You'll have a flexible work schedule in a casual and friendly work environment
- We're a very diverse international company, with 32 nationalities represented

You'll have the opportunity to travel, and work from, our other offices - including our office in Paris
